

Task

create 3 files using writeFile()

Index122.js

Index23r.js

Index24r.js

We have to use writeFile() once

And delete the above files using unlink() method. We have to use the method only once and delete all the files

```
var fs = require("fs");
const arr = ["index122.js", "index23r.js", "index24r.js"];
// to create the three files using the writeFile() method
for (i = 0; i < arr.length; i++) {
  fs.writeFile(arr[i], "File", (err) => {
    if (err) {
      console.log(err);
    } else {
      console.log("file is created");
    }
  });
}
// Deleting the all the file using single unlink() method
for (i = 0; i < arr.length; i++) {
  fs.unlink(arr[i], (err) => {
    if (err) {
      console.log(err);
    } else {
      console.log("file is deleted");
    }
  });
}
```
